

To make the Family Tree and see how families get bigger and grow fast, use the empty tree picture. Then color the leaves on the other paper and write in family names. How far back can you go?

You can make it as simple or as complicated as you like. This one is only 4-5 generations of a small family. This one is printed on the larger 11X17 paper. The one to download is only 8 1/2 X 11.

The kids might not have enough patience to cut and color all of this, but I will bet they will enjoy trying to remember all of their family members and how they are related. They will be surprised how many people are in their family once you start adding names to the leaves.
